

THE PROVEN EMS INTEGRATION PLATFORM

FOCUS ON WHAT  
MATTERS MOST:

# PATIENT CARE

## VIEW ePCR DATA PRIOR TO ARRIVAL

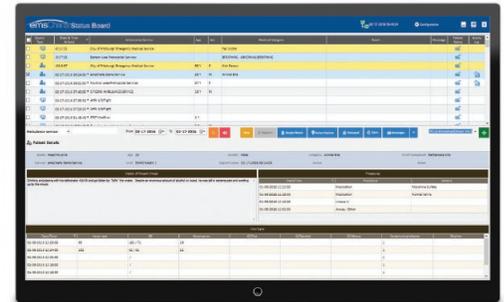

- ▶ Prepare for incoming patients
- ▶ Activate resources for patient situations
- ▶ Anticipate arrivals to align resources
- ▶ Monitor procedures and vital signs
- ▶ View patient condition ahead of arrival
- ▶ Pre-assign beds for transfer of care

**THE PROVEN EMS INTEGRATION PLATFORM**

An Emergency Room is a hectic and fast-paced environment, especially when multiple patients are being admitted each hour. emsCharts Gold Export allows us to automatically pull information from the EMS transport record, through the emsCharts Cloud, and post it on a TV monitor within the Emergency Department (ED) so all are informed. This allows clinicians to monitor a patient's arrival time, method of injury, and criticality so they can properly triage those that require rapid care as well as track which room they have been assigned.

**FEATURES AND SPECIFICATIONS**

**STANDARD FEATURES**

- ▶ Install in Hospital Emergency Departments
- ▶ Integration with emsCharts ePCR
- ▶ Integration with Computer Aided Dispatch (CAD)
- ▶ Rapid review of chief complaint, and condition
- ▶ Patient demographics (Age, Vitals, Meds, etc.)
- ▶ Patient condition transparency
- ▶ Pre-assign beds to facilitate transfer of care

**INTEROPERABILITY**

- ▶ emsCharts Gold HL7 module with Pre-registration
- ▶ Status Board as a pre-registration tool
- ▶ Bidirectional Exchange of data with EMR

**IT AND SECURITY**

- ▶ Only one outbound firewall port (443 HTTPS)
- ▶ HIPAA compliant Encryption (256 bit SSL)
- ▶ Full Audit Logging for historical reporting
- ▶ Auto refresh every 5 seconds
- ▶ No data stored locally
