

## ▶▶ ALS ROLLER & ALS PACK

The best-selling advanced life support pack in the industry is now the most **VERSATILE** with the addition of an internal lightweight frame, inset high impact wheels, and a telescoping tuck-away handle!!!

### Key NEW Features

**Ultra light** (under 3.3 pounds!) internal frame featuring a telescoping handle and inset wheel system, while still maintaining full “backpack” functionality\*

**Impervious**, quick-clean back panel which allows for rapid and easy decontamination and cleaning post response.

**Upgraded**, dual-adjust backpack straps with chest connect and “tuck-away” pocket, which allows the backpack straps to remain connected for quick carrying, yet protected from contaminants and everyday wear and tear.

**The Thomas ALS Roller and ALS Pack** also include two large exterior pockets, eight color coded removable sections, and four exterior removable clear vinyl pouches. All removable cases and pouches are securely fastened in the pack to avoid loss of equipment and supplies, and are easily removed when needed.

### Airway Section (TT 101)

The airway section consists of three separate and removable color coded pouches, designed to hold an adult BVM and airways, a pediatric BVM, and a small intubation pouch set (handle, 4 blades, syringes, and other accessories). Each pouch now also contains a clear vinyl window for quick and easy labeling and identification of each pouch’s contents. The removable base of the airway section contains side slots for ET tube storage and allows all airway components to be removed from the pack simultaneously.

Intubation Pouch  
(TT400)

Center Airway Pouch  
(TT103)

Pediatric Airway Pouch  
(TT102)

### Cardiac / Drug Box (TT300)

Our soft drug box is protected by two pieces of poly-corrugated plastic and three separate ½ pieces of self-enclosed foam. The Thomas padded drug box is able to securely hold over 50 separate drug vials, pre-fills, and medications stored in boxed form. It also includes a separate clear vinyl and lockable narcotic section. The padded center section now contains a clear vinyl zippered pouch for additional syringe or medication storage. The outside of the padded drug box includes a dry erase board and pen for patient note taking, recording vital signs, and medication re-stocking reminders.

### I.V. Section (TT500)

I.V. Fluids and accessories are stored in three separate and removable fully self-contained I.V. pouches. All equipment necessary to start a peripheral I.V. line can be contained within each of these pouches, including 1000 ml of liquids, catheters, tubing, gauze, and swabs.
