## Protectiv safety I.V. catheter

Surrounding you with safety

# ENCASED PROTECTION THAT SETS THE STANDARD

## Needlesticks: The risks are still real, even today

In 2001, 88% of nurses responding to a Web-based occupational health survey indicated that the risk of occupational hazards determine whether they will continue to work in nursing and in which clinical area.<sup>2</sup>

Approximately 500,000 percutaneous exposures to blood occur annually in hospital and non-hospital settings throughout the United States.<sup>1</sup> This is more than 1,300 injuries per day — 57 per hour.

A survey conducted by the CDC in 1998 among 14,215 healthcare workers in 12 hospitals participating in the NaSH network documented an overall underreporting rate of percutaneous injuries of 58%, with a high of 73% for surgeons and 52% for all other healthcare workers.<sup>3</sup>

---

The PROTECTIV® Safety I.V. catheter offers fully encased needle protection with proven safety, efficacy, superior performance and the control you want in a safety I.V. catheter.

---

## PROTECTIV® Safety I.V. Cathether

- Designed to resist accidental activation with you in control
- Safely encases the needle as the catheter is advanced
- Patented needle gasket designed to minimize blood exposure
- Choice of catheter biomaterials — polyurethane and FEP polymer
- Choice of needlepoint and hub design eases your transition to safety

Unique V-point needle provides ultra-smooth insertions.

Prominent push-off tab allows easy threading

## SURROUNDING YOU WITH SAFETY

### SUPERIOR SAFETY AND PERFORMANCE

- Patented, formed-in-place gasket designed to minimize blood exposure during venipuncture
- Electropolished V-point needle for best-in-class sharpness
- Encased protection designed to cover the needle throughout use

Optically clear, yet radiopaque polyurethane material for better flashback visualization

Needle guard with patented gasket designed to minimize blood contact during insertion

# ON TARGET. PRECISELY.

ProtectIV® I.V. Catheters help to give you more control... it contains the blood so you can connect when you're ready.

**Control Fit** between the catheter and the nose of the safety holder contains the blood. You can decide when to detach and connect with the infusion tubing set.

**The Control Fit helps provide you more control of each step of your I.V. start.**
