## PC Applications

The Sapphire modern, software based platform expands beyond the pump to the PC applications suite that complements the pumps;

### Pump loader

Enables upgrading or reloading software to the Sapphire pump via a wire connection.

### Drug library

Enables to set configuration settings, drug specific limit and more. When complete, the library can be uploaded to multiple Sapphire pumps.

### Fastest pm

(SW + disposable kit [16024-000-0002])  
Fastest PM is Preventative Maintenance Servicing Tool for Sapphire Infusion Pump platform. Fastest PM allows end-users to quickly and economically conduct full maintenance tests, including occlusion detection, air detection and pump accuracy checks. Fastest PM provides end-users with an immediate, downloadable authentic manufacturer. The tool is designed to significantly improve maintenance costs and runtime.

### Annual certification kit

(SW + disposable kit [15075-020-0001])  
Enables to run performance test (air detection, pressure detection and accuracy). Results are compared to manufacturing database per pump.

### Event viewer

Enables downloading and viewing the event log of the Sapphire infusion pump on a computer.
