

AED Plus®

ZOLL®

*The Best Support
For Rescuers*

Support in a Rescue 100% of the Time

CPR Saves Lives

That's why more than 30 million students to receive CPR instruction graduate from high school also require that students receive automated external defibrillation (AED) training.

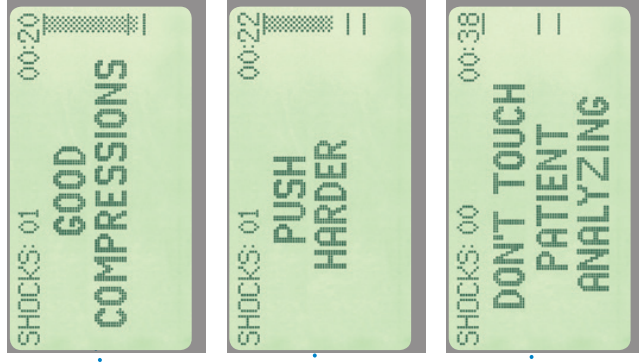

CPR + AED = even more lives saved.

The Only AED With

The AED Plus® is the only AED with real-time CPR feedback. Only half of all cardiac arrest victims will need a shock. High-quality CPR. Real CPR. Step by step, telling you whether you need to "Push Harder" or "Good Compressions."

Not all heart rhythms are shockable. High-quality CPR can potentially convert a nonshockable rhythm into a shockable rhythm. Even if this isn't possible, it keeps the blood circulating until emergency help arrives.

If a shock is required, CPR should be resumed immediately after the shock is delivered. CPR should be resumed to a normal rhythm. A shock alone may be insufficient. CPR support you 100% of the time.

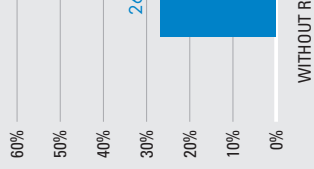

A sensor in the hand

"... monitoring of CPR quality is arguably one of the most significant advances in resuscitation practice in the past 20 years and one that should be adopted by every professional rescuer."

In a large study providers in Arizona training combine to discharge from who suffered cardiac professional definition same Real CPR Plus. AED Plus.

Half of the victims Help turned on with this technology that using Real CPR survival when the witnessed by some rhythm was ventr

User-friendly Electrodes Design

Speed is of the essence when treating a cardiac arrest victim. ZOLL's CPR-D-padz® electrodes feature a unique one-piece design to ensure fast and accurate placement. These electrodes come with a rescue accessory package, which contains scissors and other items that may be required.

Low Cost of Ownership

The AED Plus can help your organization's bottom line. Once installed, the AED Plus has a low total cost of ownership, especially when considering the logistics of tracking and changing pads and batteries over the life of the AED. Thanks to the long shelf-life of the consumables, when you compare the cost of maintenance over 10 years, this is the most cost-effective AED to own. The AED Plus is powered by lithium batteries (available from retail outlets) that last five years, and the CPR-D-padz® electrodes last five years as well if they are not used.

Fully Automatic Option

The fully automatic AED Plus is designed to make using an AED as simple as possible for a lay rescuer. If it detects a shockable heart rhythm, after a brief countdown, the AED Plus will deliver the shock automatically—no need

Teams need high-quality CPR 100% of the time. ZOLL's Real CPR time feedback on CPR quality, which can help save a life.

Advantage

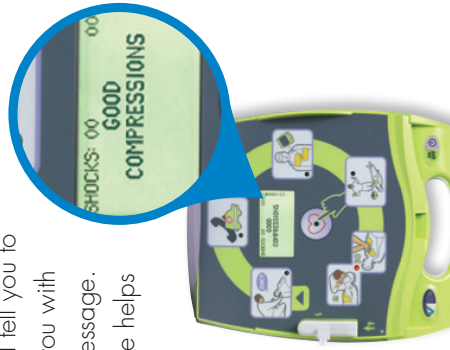

Users as thoroughly as important CPR is to arrest and how difficult doing it well.

on issues guidelines compressions should you're pushing hard

enough and fast enough to meet those guidelines? You shouldn't have to guess—you should know.

That's why the AED Plus will tell you to "Push Harder" or reassure you with a "Good Compressions" message. And an adaptive metronome helps you meet the recommended compression rate.

When it comes to helping rescuers provide high-quality CPR, no one can offer you more than ZOLL.

Warranty

yet comprehensive program that requires a minimal investment to ensure that your program can potentially save 3 or more.³

Used with the best care, AEDs are easily inspected. And because CPR and AED training is needed, refresher training programs are the most effective way to help ensure both AEDs and responders are both inspected and

Lives are not saved by AEDs alone. When cardiac arrest strikes, lives are saved by being prepared and using an AED that is maintained and fully operational—which means having a working battery and electrodes that have not expired.

It's ALL Online

PlusTrac is an online system that you can access via an Internet connection and a web browser. It provides everything needed to manage one AED or 100, including reminders when volunteer responders are due for retraining.

There's an App for That

PlusTrac makes inspecting your AED regularly quick and simple. Download the CheckAED™ App from PlusTrac to your smartphone or tablet after registering your AED. Then, when it's time to inspect your AED, simply inspect its status indicator and log the AED's readiness status in PlusTrac. You're done. If anything needs correction or replacement, the person who's managing your AED program will know right away.

Even if you have a "mixed" population of AEDs from several different manufacturers, PlusTrac can manage them all.

PlusTrac: just one more way that ZOLL provides unmatched support to save more lives.

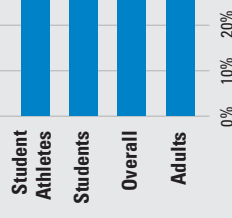

AED Programs

Research based on more than 2,000 U.S. schools with AEDs shows overall survival rates are significantly higher.

The authors concluded that AED programs demonstrate a significant benefit to students and adults who are trained in CPR and AED use. AED programs are significantly more effective when used in schools.

Survival Rates

The AED Plus from ZOLL. No AED or manufacturer can offer you more.

- The only AED with Real CPR Help
 - because every sudden cardiac arrest victim will need high-quality CPR
- A one-piece electrode pad
 - to make applying the pads as simple as possible for the rescuer
- A low total cost of ownership
 - there's nothing to buy or replace for 5 years, as long as the device is not used
